

ABSTRACT

The invention relates to a method of using a terminal (20) having a display (70), a terminal for accessing an application or application services. A method in accordance with the invention includes accessing a first application using the terminal. Features of the first application are displayed within a selected first active window (620). A second application is accessed and displayed within a second active window while features of the first application, which were formerly displayed within the selected first active window, are transformed to be displayed within a non-selected first active window (604, 606, 608, 610, 612 or 614) of the terminal.
